**DR. UĞUR MERİÇ**

ORAL MAXILLOFACIAL SURGERY DDS, PHD

Graftless Sinus Lifting

Sinus Lifting is a routine non-invasive oral surgery method. That has been used all over the World. This method has potential downside like sinus infections and low quality of bone created for the implant. Bone substitute of material is a reason for the unexpected complications. Sinus Lifting with bone substitute material will be discussed with case studies, long term success and procedures.

**DR. YULIYA SLYNKO**

ORAL MAXILLOFACIAL SURGERY DDS, PHD

Collecting and using Autogenous Bone in Implant Surgery; Drilling without Saline

Even if the Autogenous Bone is accepted as a "Gold Standard", usage in our daily practices is very limited. Difficulties in acquiring sufficient quantity of the material, needs a secondary surgery and probable resorptions possibilities are the prejudices for the clinicians avoiding autogenous bone in their daily practices. The philosophy indications and application of autogenous bone from simple to complex cases will be discussed in this presentation. Techniques of collecting autogenous bone by drilling without saline.
